Dear Mark,

I am really sorry for the delays, but this is more or less what I anticipated when we were discussing the survey, considering my teaching workload...

I managed to write up a brief report note where you will find the basic survey metadata, extent, etc, as well as interpretations with short comments on the results. Processed GPR time slices are also attached, for the record (in the name of the file "sXX" stands for the number of a time slice, and "dX.XXX" stands for the depth, expressed in meters below ground level).

To quickly summarise the results in bullet points:

- The soil conditions were not ideal for the GPR survey, especially in the paved area
- Large reflective zone has been detected in the lawn area
- That reflective zone might be interpreted as a land backfill for ground levelling, possibly some rubble.
- A few anomalies could be identified and interpreted as burials, however they are not too convincing. It might be the case that the graves were exhumed before ground levelling, or after the levelling are simply too deep to be picked up by the GPR.

Should you have further questions regarding the results, please let me know!

Sorry once again, it's been a really busy semester...

Best Regards,

Michael Pisz

Dear Michael,

I hope you are keeping well.

Could you please give me an update as regards the drafting of the geophysical report for St. Andrew's, Keighley. Our next project meeting will be held on 23 May 2024, so it would be good if the report were to hand by then. If, however, student exams are taking up all your time this month, could you please give me a fixed date after the exam period by which you will be able to submit your report.

Many thanks in advance.

Kind regards
Mark
